

A decade or better has disappeared since Soundstream Reference amplifiers graced the car audio industry. Audiophile veterans love them, while new-schoolers fantasize of them. Only the privileged have heard. Soundstream is immensely proud to re-introduce Reference amplifiers. No “dream” amplifiers never to be grasped, rather a full line of the industries finest.

Improving the best of any product requires new technologies & innovations. Soundstream Reference amplifiers boast damping factors exceeding 1,000, some 3,000+. Total Harmonic Distortion levels measure less than 0.02%. These match or surpass average amplifiers!

An age old theory describes the human ear struggling to hear the difference between amplifiers of equivalent power. Anyone believing this myth has obviously not auditioned Soundstream Reference amplifiers.

The best things are worth waiting for, Listen and Feel...
